

Canadian digital sovereignty

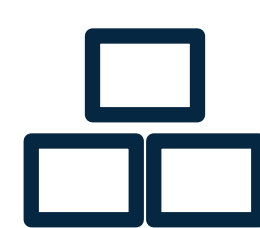

As more of daily life and the economy runs on digital technology, who builds that infrastructure, and who gets the rewards, matters. FTL is building and running it locally, so that Canada, New Brunswick and Miramichi are the ones to benefit from the frontier of technology.

Local, regional and national

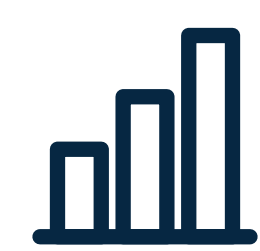

Owned in Canada

A Canadian-owned and controlled company, headquartered in Fredericton.

Built in New Brunswick

Built with local contractors and a local workforce, and operated from Canada.

Growth in Miramichi

New investment and jobs that lift Miramichi and the region around it.

A different kind of data centre

FTL is a colocation facility: secure space and power that many different organizations use to run their own equipment. It is designed to enable data sovereignty, keeping Canadian data under Canadian jurisdiction.

	LARGE GLOBAL TECH CAMPUS	FTL
Who it serves	Typically one global technology company	Canadian companies first, open to customers worldwide
Who controls it	Often decided at a head office abroad	Decided in New Brunswick
Where it benefits	Usually the company's home market	Local jobs, suppliers and tax revenue

Built for Canadian organizations, in the community that hosts it.

What this means for Canada and New Brunswick

Digital infrastructure now underpins the modern economy. FTL's campus is built so the investment, jobs and tax revenue it creates are felt across Canada and in New Brunswick.

- **\$2.7B** of local investment at full campus
- **A new anchor industry** bringing export revenue
- **Tax revenue** and infrastructure improvements
- **Long-term skilled jobs**
